

INOMETA pull rings for hydraulic adapters

Set-up times are an important factor for productive and cost-reduced work. For this reason, INOMETA has the Performance series for drawing dies on hydraulic adapters introduced to make every day handling easier for your customers in the ever-faster everyday printing business.

All benefits at a glance

- Optical and fast assignment of the adapters in the warehouse and in the set-up process
- Simplified allocation in the printing works
- Reduction of set-up times through faster allocation
- Customizable design options
- Can be retrofitted to existing adapters
- Solvent-resistant in colour

Recess for simplified disassembly and assembly of the fastening screws

Stand: 02/2023

Application examples

INOMETA Standard

All INObridge® CH CFRP adapters are delivered in blue as standard.

Example of a design option based on the STORK format:

Color design according to customer requirements from the following color selection:

*Aluminum (unanodized / untreated)

INOflex®

In order to enable its customers to have a fast and standardized workflow in the printing process, INOMETA has adapted and optimized its range of hydraulic adapters in terms of recognition and assignment to the needs of its customers. In the daily printing process, fast assignment and thus reduction of set-up times are an important factor for productive and cost-reduced work. For this reason, INOMETA has introduced a series for pull rings on hydraulic adapters in order to make every day handling easier for your customers in everyday printing work that is becoming ever faster.
